

In 1994, we invented the lighting balloon concept. Since then the Sirocco by Airstar has become a global reference.
The envelope of an Airstar Sirocco is made from a woven material which diffuses the internal light source. Our products light up where others don't, providing better visibility of the immediate work area and its surroundings. For all your projects, quality lighting is essential to work efficiently and in a secure environment. Airstar lighting balloons meet this need, thanks to homogeneous and diffused $360^{\circ}$ light, without shadow andglare free.

[...] The Airstar LED balloon is ideal in difficult
areas such as steep motorways embankments, is
non-intrusive unlike the traditional tower light (vital
when working area is at a premium) and is compact and
far more cost effective to deploy in comparison to the
cumbersome tower lighting set that requires a towing
vehicle for each set.
Highways England have reported the lights are highly
innovative and a vast improvement in comparison with
other forms of lighting.
